

DIRECTIONS: Take 2-4 capsules 30 minutes prior to training. Additionally, you may take one more serving upon awakening.

L-Arginine is a conditionally essential amino acid, meaning that under normal circumstances it can be synthesized by the human body to cover its needs. In case of poor nutrition or heavy physical exertion, the biosynthetic pathway cannot produce sufficient quantities of Arginine and some must be consumed from the diet or from supplements. Being the only precursor of Nitric Oxide (NO) and important precursor of Creatine, Arginine supplementation is a general practice among athletes, bodybuilders. Taking high dose capsules is the easiest way to cover the increased demand of Arginine.

Caution: As with all exercise and nutritional programs, please consult your physician first. Keep out of the reach of children! Use this product as a food supplement only.

Allergen info: Manufactured in a facility that processes milk, soy and egg proteins, and gluten, peanuts!

Store in a cool, dry place. Heat and sunlight may damage the bottle!

Best before end: see on packaging
